GFM voltage-sag examples: steady-state and sampled instantaneous contraction boundaries

Red: intersection over fault-on nu samples at fixed Usag and fixed reference metric; not a regional proof

A: Case 2, gamma0=17.457603 deg, Usag=0.4

Sampled contraction maintained

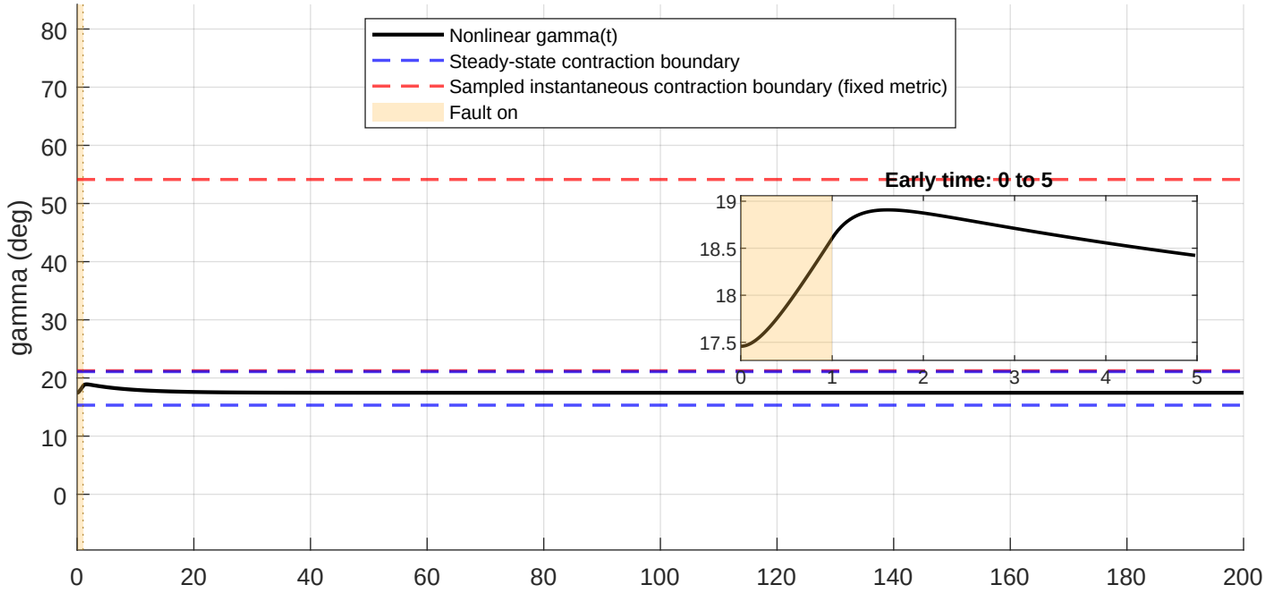

Recovered original equilibrium

B: Case 2, gamma0=17.457603 deg, Usag=0.3

Sampled contraction violated during fault

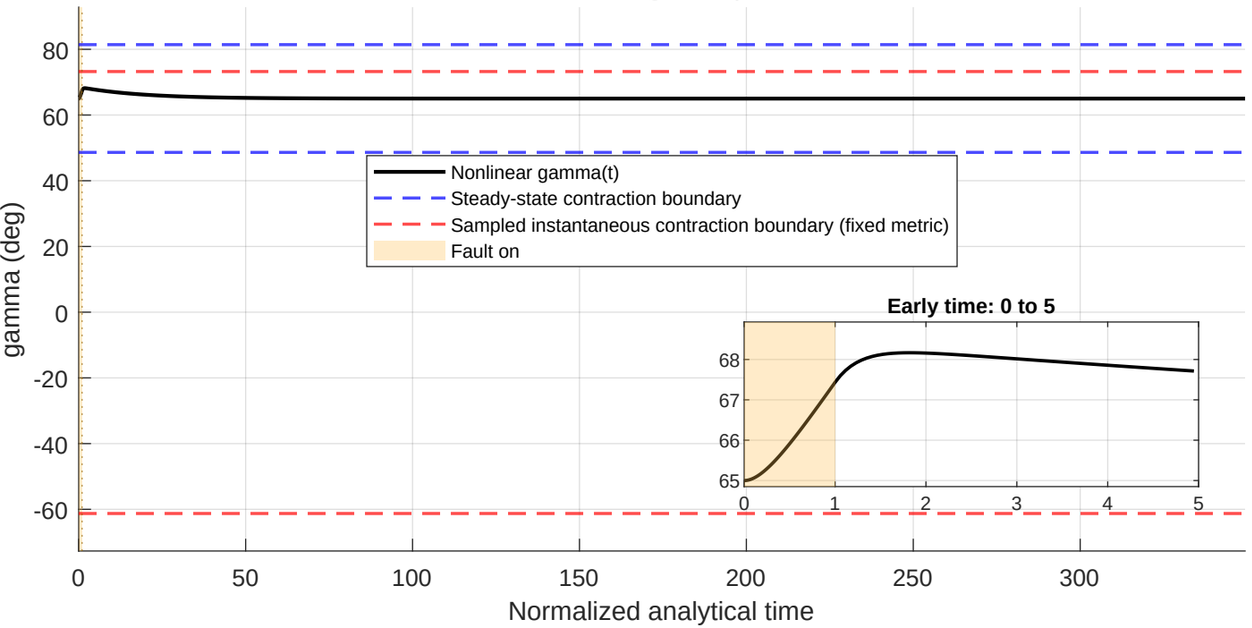

Recovered original equilibrium

C: Case 4, gamma0=65.000000 deg, Usag=0.5

Sampled contraction maintained

Recovered original equilibrium

D: Case 4, gamma0=65.000000 deg, Usag=0.4

Sampled contraction violated during fault

Recovered original equilibrium
