Saved post-fault trajectories | 60% voltage sag
Widened interval-certified rectangles (M < 10I); sampled containment only

Normalized frequency, ν (pu)

Unwrapped angle, γ (deg)

Full saved trajectories (unwrapped)

ν (pu)

γ (deg)

Certified inactive rectangle

Nominal equilibrium
Inside correct-mode rectangle
Outside / uncertified gap

Solid links join two inside samples; links touching an outside sample are dashed. The uncertified switching gap is excluded.
Time inside: trapezoidal time-weighted estimate from saved sample membership. Main view is zoomed; inset retains complete excursions.
Sampled numerical containment is not a continuous-time containment proof or full stability certification.
